

QA INTERVIEW ACCELERATOR

30-60-90 Day Plan Template

Show you are ready to deliver from day one in a new QA role.

Introduction

A 30-60-90 day plan shows an employer you think ahead and will add value quickly. Some interviews ask for one; even when they do not, mentioning your plan is impressive.

Instructions

- Adapt the phases below to the specific role.
- Focus on learning first, then contributing, then improving.
- Keep goals realistic and outcome-focused.

The Three Phases

Phase	Theme	Example goals
First 30 days	Learn	Understand the product, team, tools and process; meet stakeholders; run first tests
Days 31-60	Contribute	Own testing for stories; write clear reports; add value in ceremonies
Days 61-90	Improve	Suggest a process or coverage improvement; deepen domain knowledge; build trust

Worked Example (30-day goals)

- Learn the product and key user journeys
- Set up tools and access (Jira, test management, environments)
- Understand the test process and where I fit
- Test my first stories with guidance

Blank Reusable Template

- First 30 days (Learn):
- Days 31-60 (Contribute):
- Days 61-90 (Improve):

Practical Exercise

Draft a 30-60-90 plan for a role you are targeting, with three goals per phase.

Best Practices

- Front-load learning before proposing changes.
- Tie goals to outcomes, not activity.
- Keep it concise — one page.

Common Mistakes

- Promising big changes before understanding the team.
- Vague goals with no outcomes.
- A generic plan ignoring the specific role.

INSIDE STLC PRO TIP

Even if not asked, saying "I would spend my first month learning the product and process before suggesting improvements" signals maturity and earns instant trust.
