

QA INTERVIEW ACCELERATOR

QA Portfolio Presentation Guide

Present your portfolio so it wins interviews.

Introduction

A portfolio only helps if you can talk through it well. This guide shows you how to present your QA work so an interviewer immediately sees you can do the job.

Instructions

- Make sure your portfolio is public and links work.
- Prepare a 60-second walkthrough of each key artefact.
- Lead with the value, not the mechanics.

What to Showcase

- A test plan / strategy snapshot
- Well-structured test cases (showing your techniques)
- A professional bug report
- An API test collection (Postman)
- An exploratory charter and notes
- A certificate or course project

The 60-Second Walkthrough Formula

Step	Say
What	What this artefact is
Why	The problem/risk it addresses
How	The technique or thinking you applied
Result	What it demonstrates about you

Worked Example

"This is a bug report I wrote for a checkout issue (what). The defect blocked payments (why). I reproduced it, narrowed it to a recent change and documented it with evidence and clear severity (how). It shows I can communicate a critical issue so it gets fixed fast (result)."

Practical Exercise

Pick three artefacts and write a 60-second walkthrough for each using the formula. Practise them out loud.

Best Practices

- Curate — a few strong, well-explained pieces beat many.
- Tie each artefact to a skill the role needs.
- Keep links tidy and accessible.

Common Mistakes

- Showing work with no explanation.
- Broken or private links.
- Talking through mechanics instead of value.

INSIDE STLC PRO TIP

Offer your portfolio proactively: "I have a portfolio I can walk you through" signals confidence and gives you control of the narrative.
