

QA INTERVIEW ACCELERATOR

Module 6 Assignment — Test Task Preparation

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

Many QA interviews include a live test task. You need a structured approach that shows your thinking, applies techniques, and documents clear results under time pressure.

What you'll demonstrate

- Approach a test task methodically
- Write prioritised test cases under time pressure
- Raise clear defects and state assumptions

What to submit

- A completed practice test task: prioritised test cases for a feature, plus a short bug report
- A note of your score from a mock run and one area to improve

Step-by-step

1. Take a sample feature and a time-box
2. Clarify scope, then apply techniques (partitions, boundaries, negative)
3. Write prioritised, concise test cases and one clear bug report
4. State your assumptions explicitly

Submission format

Submit as a PDF or DOCX.

How your work is assessed

If a QA lead reviewed this, they would look for:

- A clear, narrated approach
- Prioritised, concise output
- Reproducible defects with stated assumptions

Templates & resources to use

- Mock Interview Practice Pack — find it in the Resource Vault.

INSIDE STLC PRO TIP

Your approach is assessed as much as your findings — a structured tester who finds five real issues beats a random clicker who finds six.
