

90-DAY SOFTWARE TESTING CAREER ROADMAP

Module 3 Assignment — Defect Management

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

Testing an application, you find a series of issues and need to log them so developers can fix them quickly — clear, reproducible, and correctly prioritised.

What you'll demonstrate

- Write professional, reproducible bug reports
- Apply severity and priority correctly
- Capture useful evidence

What to submit

- 10 bug reports from any website or app
- Each with title, environment, steps, expected vs actual, evidence, severity and priority

Step-by-step

1. Explore a site/app and find genuine issues (or seed some)
2. For each, write a clear title (where + what) and minimal reproducible steps
3. State expected vs actual separately and attach evidence
4. Assign and justify severity and priority

Submission format

Submit as a PDF or DOCX. Quality over quantity — each report must be independently reproducible.

How your work is assessed

If a QA lead reviewed this, they would look for:

- Reproducible steps and specific titles
- Severity vs priority used correctly and justified
- Evidence attached
- No vague or emotional descriptions

Templates & resources to use

- Bug Report Template — find it in the Resource Vault.
- Defect Severity vs Priority Guide — find it in the Resource Vault.

INSIDE STLC PRO TIP

Run each report through one test: "could a developer reproduce and fix this without asking me anything?" If not, it is not finished.
