

## 90-DAY SOFTWARE TESTING CAREER ROADMAP

# Module 5 Assignment — Jira & Test Management

Assignment brief: scenario, deliverables, steps and how your work is assessed.

## About this assignment

You need to show you can work the way real teams do: tracking stories, tests and defects in Jira and reporting testing status clearly.

## What you'll demonstrate

- Create well-formed stories, tasks and defects
- Link tests, bugs and requirements
- Report testing status clearly

## What to submit

- A mock sprint board (free Jira trial or screenshots)
- 3 user stories with acceptance criteria, 5 linked tasks, 5 defects, and a testing status update

## Step-by-step

1. Set up a board (or template) with the issue types
2. Add 3 stories with acceptance criteria and 5 linked tasks
3. Log 5 defects with full details, linked to their stories
4. Produce a short testing status update (what is tested vs not)

## Submission format

Submit as a PDF or screenshots showing the board and items.

## How your work is assessed

If a QA lead reviewed this, they would look for:

- Clean, well-described issues
- Correct links between stories, tests and bugs
- Honest, current statuses
- A status update led by risk, not raw counts

## Templates & resources to use

---

- Test Plan Template — find it in the Resource Vault.
- Requirements Traceability Matrix (RTM) — find it in the Resource Vault.

### INSIDE STLC PRO TIP

Make every issue readable by someone who was not there — clear summaries and correct links are exactly what teams rely on day to day.
