

## AI FOR QA TESTERS

# Module 10 Assignment — AI in Agile QA Workflows

---

Assignment brief: scenario, deliverables, steps and how your work is assessed.

---

## About this assignment

---

You will show how to weave AI through one sprint — refinement, regression scoping, reporting — using it to prepare and summarise while you lead the decisions.

## What you'll demonstrate

---

- Use AI across sprint stages
- Scope a risk-based regression set
- Report quality led by risk

## What to submit

---

- How you would use AI across one sprint
- For a recent change: AI-brainstormed impacted areas and a prioritised regression set with a one-line scope justification

## Step-by-step

---

1. Describe AI's role at refinement, planning, regression and reporting
2. For a change, use AI to list impacted areas
3. Filter by real risk into a prioritised set
4. Justify the scope in one line

## Submission format

---

Submit as a PDF or DOCX.

## How your work is assessed

---

If a QA lead reviewed this, they would look for:

- AI used to prepare and summarise
- Risk-led regression scope with justification
- Human collaboration kept central
- Reports led by risk, not counts

## Templates & resources to use

---

- AI Regression Planning Template — find it in the Resource Vault.

### INSIDE STLC PRO TIP

AI widens what could break; you narrow it to what matters. Always cover the critical journeys and record why you included/excluded areas.
