

AI FOR QA TESTERS

Module 2 Assignment — AI Fundamentals for Testers

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

Before relying on AI output, you need to understand how it behaves — why it can sound confident yet be wrong — and how to use it securely.

What you'll demonstrate

- Explain how LLMs generate output (simply)
- Recognise hallucinations and limitations
- State secure, responsible-use rules

What to submit

- Three of your own prompts, each with the output and whether you spotted a hallucination or limitation
- Two rules you will follow for responsible AI use

Step-by-step

1. Run three prompts through an AI tool
2. For each, record the prompt, output, and any inaccuracy
3. Note how confidently it presented anything wrong
4. Write two responsible-use rules

Submission format

Submit as a PDF or DOCX.

How your work is assessed

If a QA lead reviewed this, they would look for:

- Clear, simple grasp of how LLMs work
- Awareness of hallucinations and limits
- Concrete data-safety and verification rules

Templates & resources to use

- AI Hallucination Checklist — find it in the Resource Vault.
- AI Usage Policy Template — find it in the Resource Vault.

INSIDE STLC PRO TIP

Be most sceptical of precise specifics — field names, numbers, rules. The more exact and confident the detail, the harder you verify it.
