

AI FOR QA TESTERS

Module 3 Assignment — Prompt Engineering for QA

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

Your prompts are producing shallow output. You need to write structured prompts that reliably generate useful, specific QA results.

What you'll demonstrate

- Write structured prompts (role/context/task/format/constraints)
- Improve a weak prompt
- Build reusable prompt patterns

What to submit

- Five well-structured QA prompts for different testing tasks
- A before/after for one weak prompt you improved

Step-by-step

1. Pick five testing tasks
2. Write a structured prompt for each using the five-part anatomy
3. Take one weak prompt and improve it; show both versions
4. Note when you would use each prompt

Submission format

Submit as a PDF or DOCX.

How your work is assessed

If a QA lead reviewed this, they would look for:

- Well-structured prompts (role/context/task/format/constraints)
- A clear before/after improvement
- Patterns you can reuse

Templates & resources to use

- Prompt Writing Framework — find it in the Resource Vault.
- AI Prompt Cheat Sheet for Testers — find it in the Resource Vault.

INSIDE STLC PRO TIP

Bake your standards into the prompt up front (format + constraints like "do not invent fields") — far faster than fixing weak output afterwards.
