

AI FOR QA TESTERS

Module 4 Assignment — Requirements Analysis with AI

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

A new story is heading into the sprint. You will use AI to surface ambiguity, gaps and untestable criteria so you can raise sharp questions before code is written.

What you'll demonstrate

- Use AI to find gaps and ambiguity
- Turn findings into team questions
- Confirm acceptance criteria are testable

What to submit

- A review of a real or sample user story
- Five sharp questions for the team, with the two most important marked

Step-by-step

1. Paste a (sanitised) user story and prompt AI to find ambiguity, gaps and untestable criteria
2. Turn the output into clear questions
3. Mark the two most important by risk
4. Propose testable acceptance criteria where weak

Submission format

Submit as a PDF or DOCX.

How your work is assessed

If a QA lead reviewed this, they would look for:

- Real ambiguities and gaps identified
- Findings turned into sharp questions
- Testable acceptance criteria proposed
- Gaps prioritised by risk

Templates & resources to use

- AI Requirement Review Workbook — find it in the Resource Vault.

INSIDE STLC PRO TIP

Turn AI's findings into questions, not accusations — that is how value is added at refinement.
