

90-DAY SOFTWARE TESTING CAREER ROADMAP

Bug Report Template

Report defects so clearly they can be reproduced and fixed without a single follow-up question.

Introduction

A great bug report gets fixed fast because the developer can reproduce it from your report alone. This template captures everything needed: environment, steps, expected vs actual, severity, priority and attachments.

Instructions

- Write a concise title: what is wrong and where.
- Record the environment (browser/device/build/URL).
- List numbered, exact reproduction steps.
- State the expected result and the actual result separately.
- Set severity (technical impact) and priority (business urgency).
- Attach evidence (screenshot, video, logs).

Real QA Example

Field	Example
Title	Checkout — Apply Coupon button does nothing on mobile (build 1.4.2)
Environment	iPhone 13, Safari, build 1.4.2, /checkout
Preconditions	Item in cart; coupon SAVE10 is valid
Steps to Reproduce	1. Add item to cart 2. Open cart on mobile Safari 3. Enter SAVE10 4. Tap Apply
Expected Result	10% discount is applied and shown in the total
Actual Result	Nothing happens; no discount, no error message
Severity	Major
Priority	High
Attachments	screen-recording.mp4

Blank Reusable Template

Field	Detail
Title	
Environment	
Preconditions	
Steps to Reproduce	1. 2. 3.
Expected Result	
Actual Result	
Severity	Critical / Major / Minor / Trivial
Priority	High / Medium / Low
Attachments	
Notes	

Best Practice Tips

- If a developer cannot reproduce it from your report alone, it is not finished.
- Keep severity and priority separate — they are different things.
- Reduce to the minimum steps that reliably trigger the bug.

Common Mistakes

- Titles like "it is broken" or "checkout bug".
- Missing environment or build number.
- No expected vs actual, leaving the developer to guess your intent.

INSIDE STLC PRO TIP

Consistent, complete bug reports build your reputation faster than the number of bugs you find. Keep this template to hand and use it every time.
