

90-DAY SOFTWARE TESTING CAREER ROADMAP

Daily QA Task Checklist

A simple daily routine to stay organised and effective as a tester.

Introduction

A consistent daily routine keeps your testing focused and your communication tight. Use this as a starting point and adapt it to your team.

Start of Day

- Review your board (assigned stories, bugs, retests)
- Check new builds / deployments to test
- Prepare for stand-up: progress, plan, blockers

During the Day

- Test stories as they are completed (test little and often)
- Log clear, reproducible defects
- Retest fixed defects and update their status
- Collaborate early on upcoming stories (questions/testability)

End of Day

- Update statuses so the board reflects reality
- Note anything blocked or at risk
- Capture exploratory findings and new questions

Common Mistakes

- Leaving all status updates to the end of the sprint.
- Treating stand-up as a status report rather than surfacing blockers.
- Not capturing exploratory findings while they are fresh.

INSIDE STLC PRO TIP

Keeping your board honest in real time builds trust fast — teams quickly rely on testers whose status you can believe.
