

90-DAY SOFTWARE TESTING CAREER ROADMAP

Module 4 Assignment — Agile & Scrum for Testers

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

Your team works in two-week sprints. At refinement you are expected to question stories and strengthen their acceptance criteria so defects are prevented early.

What you'll demonstrate

- Review user stories for gaps and ambiguity
- Write strong, testable acceptance criteria
- Show how a tester contributes across ceremonies

What to submit

- A review of 5 user stories
- For each: missing/unclear criteria, suggested criteria, and the testing you would do in the sprint

Step-by-step

1. Select or write 5 user stories
2. For each, identify ambiguity and missing scenarios (negative/edge)
3. Propose specific, testable acceptance criteria
4. Note the testing you would perform and questions you would raise at refinement

Submission format

Submit as a PDF or DOCX, organised story by story.

How your work is assessed

If a QA lead reviewed this, they would look for:

- Sharp testability questions raised early
- Strong, testable acceptance criteria
- Awareness of the tester's role across the sprint
- Vague criteria challenged, not accepted

Templates & resources to use

- Agile Testing Cheat Sheet — find it in the Resource Vault.

INSIDE STLC PRO TIP

Phrase your findings as questions you would ask the team ("what happens if payment times out here?") — that is how value is added at refinement.
