

90-DAY SOFTWARE TESTING CAREER ROADMAP

Module 9 Assignment — AI for Software Testing

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

Your team is adopting AI tools. You need to show you can use AI to work faster while verifying its output and using it responsibly.

What you'll demonstrate

- Write effective QA prompts
- Generate and validate AI output
- Use AI responsibly (data, verification, accountability)

What to submit

- 20 prompts you used with an AI tool for testing tasks
- 10 AI-generated test cases
- A validation review of which outputs were accurate, which needed improvement, and why

Step-by-step

1. Use AI to draft test cases and ideas with well-structured prompts
2. Capture the prompts and the outputs
3. Review the outputs — correct, remove hallucinations, add gaps
4. Write a short responsible-AI statement (data, verification, accountability)

Submission format

Submit as a PDF or DOCX, prompts and outputs followed by your review notes.

How your work is assessed

If a QA lead reviewed this, they would look for:

- Well-structured prompts
- Clear validation of AI output (kept/changed/rejected)
- Hallucinations caught and removed
- Responsible-use awareness

Templates & resources to use

- Test Case Template — find it in the Resource Vault.

INSIDE STLC PRO TIP

The validation is what proves QA skill — anyone can generate; a professional catches what is wrong or missing.
