

PRACTICAL TEST AUTOMATION WITH PLAYWRIGHT

Module 12 Assignment — Portfolio Project

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

Your capstone: build a complete automation framework and publish it as a public GitHub repository for self-review against the model solution.

What you'll demonstrate

- Build an end-to-end framework
- Document it professionally
- Publish it with green CI

What to submit

- A public GitHub repo with BDD, feature files, step definitions, Playwright tests, page objects, utilities, configuration, reporting and a CI pipeline
- A professional README
- A green CI run

Step-by-step

1. Build the framework to the quality bar (robust locators, web-first assertions, independent data, page objects, an API test)
2. Wire up GitHub Actions and confirm green CI
3. Write a clear README (overview, how to run, coverage, tech)
4. Publish public and prepare a 60-second walkthrough

Submission format

Submit your public GitHub repository URL for self-review against the model solution.

How your work is assessed

If a QA lead reviewed this, they would look for:

- A focused, complete framework (BDD, page objects, API, CI)
- Robust locators and reliable tests
- A clear README and green CI
- Ability to explain your design choices

Templates & resources to use

- Automation Portfolio Project Workbook — find it in the Resource Vault.
- Playwright Command Cheat Sheet — find it in the Resource Vault.

INSIDE STLC PRO TIP

A public Playwright repo with green CI and a clear README does more for your job hunt than any certificate — it shows exactly how you think and code.
