

PRACTICAL TEST AUTOMATION WITH PLAYWRIGHT

Module 1 Assignment — Automation Fundamentals

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

Your team is considering automation and wants your judgement on what to automate — and what to keep manual — with clear, defensible reasoning.

What you'll demonstrate

- Decide what to automate using sound criteria
- Apply the test pyramid (right layer)
- Justify each decision

What to submit

- A review of 20 sample test cases
- For each: automate or keep manual, the layer, and a one-line reason

Step-by-step

1. Take 20 sample test cases
2. For each, decide automate/manual and the layer
3. Justify against frequency, stability, value and maintenance
4. Summarise your automation strategy

Submission format

Submit as a PDF or DOCX.

How your work is assessed

If a QA lead reviewed this, they would look for:

- Sensible automate/not-automate decisions with reasons
- Awareness of the pyramid
- No "automate everything" without reasoning
- Decisions justified by risk and ROI

Templates & resources to use

- Automation Best Practices Checklist — find it in the Resource Vault.

INSIDE STLC PRO TIP

Knowing what NOT to automate (volatile, one-off, exploratory) is as important as what to automate — say so explicitly.
