

PRACTICAL TEST AUTOMATION WITH PLAYWRIGHT

Module 10 Assignment — AI Assisted Automation

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

You will use AI to improve an automation framework — generating or refactoring tests — while keeping ownership and using it responsibly.

What you'll demonstrate

- Use AI to accelerate automation
- Review and conform generated code
- Apply responsible-AI practice

What to submit

- An AI-improved test or page object
- The prompts you used, what AI produced, and what you verified or changed before trusting it
- Your responsible-AI rules

Step-by-step

1. Use AI to generate or refactor part of your framework
2. Review the output (robust locators? code understood?)
3. Conform it to your patterns and verify it runs
4. Record prompts, changes, and your safety rules

Submission format

Submit as a PDF or DOCX.

How your work is assessed

If a QA lead reviewed this, they would look for:

- AI used to accelerate, with code reviewed
- Brittle locators fixed; fixes verified
- No secrets/proprietary code shared
- Code you can explain

Templates & resources to use

- AI Prompt Library for Automation Engineers — find it in the Resource Vault.
- Code Review Checklist for Test Automation — find it in the Resource Vault.

INSIDE STLC PRO TIP

Generated code that does not match your conventions creates inconsistency debt — always conform it to your patterns before it lands.
