

PRACTICAL TEST AUTOMATION WITH PLAYWRIGHT

Module 2 Assignment — Behaviour Driven Development

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

Your team uses BDD. You need to express behaviour in clear, readable Gherkin that a product owner could confirm without seeing any code.

What you'll demonstrate

- Write clear feature files
- Use scenarios and scenario outlines
- Keep steps at the behaviour level

What to submit

- Feature files for Login, Checkout and Registration
- Including happy-path, negative and at least one scenario outline with an examples table

Step-by-step

1. Write a Feature with scenarios for each flow
2. Add negative scenarios and a scenario outline
3. Keep steps declarative (behaviour, not clicks)
4. Check a non-technical reader could follow them

Submission format

Submit as a PDF/DOCX or a link to the .feature files.

How your work is assessed

If a QA lead reviewed this, they would look for:

- Readable, declarative scenarios
- Negative and outline coverage
- Consistent vocabulary
- Business language, not technical detail

Templates & resources to use

- Test Structure & Naming Conventions Guide — find it in the Resource Vault.

INSIDE STLC PRO TIP

The readability test: could a non-technical colleague read your feature file and confirm the behaviour is right? If not, simplify the language.
