

PRACTICAL TEST AUTOMATION WITH PLAYWRIGHT

Module 3 Assignment — Step Definitions

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

Your feature files need to run. You will convert them into thin, reusable step definitions that delegate to page objects.

What you'll demonstrate

- Map features to step definitions
- Keep steps thin and reusable
- Avoid duplication

What to submit

- Working step definitions for your Module 2 feature files
- Evidence they are thin (delegating to page objects) and free of duplication

Step-by-step

1. Implement Given/When/Then for each scenario
2. Keep each step to one responsibility, delegating to page objects
3. Parameterise steps for data-driven scenarios
4. Remove or merge any near-duplicate steps

Submission format

Submit your step definition code as a PDF/DOCX export or a repository link.

How your work is assessed

If a QA lead reviewed this, they would look for:

- Thin glue delegating to page objects
- Given/When/Then used correctly

- Reusable, parameterised steps
- No duplicate steps

Templates & resources to use

- Code Review Checklist for Test Automation — find it in the Resource Vault.

INSIDE STLC PRO TIP

Treat step definitions as glue, not logic — the thinner they are, the more your framework's strength lives in well-tested page objects.
