

PRACTICAL TEST AUTOMATION WITH PLAYWRIGHT

Module 7 Assignment — Framework Architecture

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

Your framework needs to scale. You will refactor it into a clean, reusable structure that the 100th test is as easy to add to as the 10th.

What you'll demonstrate

- Structure a scalable framework
- Extract utilities and base classes
- Add logging and reporting

What to submit

- Your framework refactored into a clear structure (tests, pages, components, fixtures, utils, data)
- A short note explaining two architecture decisions

Step-by-step

1. Organise files by concern
2. Extract helpers and a thin base/fixtures for shared setup
3. Add reporting and useful logging
4. Document your structure and two decisions

Submission format

Submit as a PDF/DOCX or a repository link.

How your work is assessed

If a QA lead reviewed this, they would look for:

- Clear, scalable structure
- Reusable utilities/fixtures (no copy-paste)
- Logging and reporting present
- Parallel-safe, independent tests

Templates & resources to use

- Test Structure & Naming Conventions Guide — find it in the Resource Vault.
- Automation Best Practices Checklist — find it in the Resource Vault.

INSIDE STLC PRO TIP

Prefer composition (fixtures, components) over deep inheritance — one thin BasePage is helpful; a five-level hierarchy is a maintenance trap.
