

PRACTICAL TEST AUTOMATION WITH PLAYWRIGHT

Module 9 Assignment — Git & CI/CD

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

Automated tests deliver most value when they run automatically. You will connect your framework to GitHub and run it on every push via GitHub Actions.

What you'll demonstrate

- Use Git and pull requests
- Run Playwright in GitHub Actions
- Upload reports as artefacts

What to submit

- A GitHub Actions workflow that installs browsers, runs the suite and uploads the report
- A link to a successful (green) workflow run
- A short note on your setup

Step-by-step

1. Push your framework to GitHub
2. Add a workflow (checkout, setup-node, npm ci, install --with-deps, test, upload report)
3. Trigger it on push and pull_request
4. Confirm a green run and capture the link

Submission format

Submit a link (URL) to a successful workflow run, plus your setup note.

How your work is assessed

If a QA lead reviewed this, they would look for:

- A working CI workflow

- Browsers installed with --with-deps
- Report uploaded as an artefact
- A green run on push/PR

Templates & resources to use

- CI/CD Integration Guide (GitHub Actions) — find it in the Resource Vault.

INSIDE STLC PRO TIP

A green CI badge on a public repo is a powerful portfolio signal — it shows you can wire tests into a real pipeline, not just write them.
