

AI FOR QA TESTERS

AI-Assisted QA Workflow Poster

Where AI fits across the testing lifecycle — at a glance.

The AI-Assisted QA Workflow

Print this and keep it visible. It shows where AI helps across the testing lifecycle — and where your judgement stays in control at every step.

Across the Lifecycle

Stage	AI assists with	You stay in control of
Requirements	Spotting ambiguity and gaps	Deciding what to clarify
Test design	Drafting cases and ideas	Coverage, risk and accuracy
Test data	Generating synthetic data	Validity and privacy
Execution	Summarising, triaging notes	Actual testing and observation
Defects	Polishing report wording	Technical facts and severity
Regression	Brainstorming impacted areas	Final scope by risk
Reporting	Drafting summaries	The quality story and decisions

The Golden Rule

AI drafts and assists. You verify, decide and own. Quality decisions are never delegated to a model.

Three Safety Checks (every time)

- Data: nothing sensitive went into the prompt.
- Verify: every specific checked against reality.
- Own: I reviewed it and stand behind it.

INSIDE STLC PRO TIP

The strongest modern testers are not the ones who use AI the most — they are the ones who know exactly where to trust it and where not to.
