

AI FOR QA TESTERS

AI Bug Report Review Guide

Use AI to sharpen bug reports without losing your own judgement.

Introduction

AI is excellent at tightening the wording, structure and clarity of a bug report — but the technical accuracy stays your responsibility. This guide shows you how to use AI to review and polish a report while keeping the facts correct.

Instructions

- Write the bug report yourself first, with the real facts.
- Ask AI to review it for clarity, structure and completeness.
- Apply the wording improvements; verify every technical detail yourself.
- Never paste production data, credentials or customer PII into the prompt.

Worked Example (review prompt)

"Review this bug report for clarity, structure and missing information. Suggest improvements to the title, steps to reproduce, and expected vs actual results. Do not invent any technical details — only flag what is missing: [paste sanitised report]."

What AI Should Check

Element	Question
Title	Is it specific and scannable (what/where)?
Steps	Are they numbered, minimal and reproducible?
Expected vs actual	Are both stated clearly and separately?
Environment	Build, browser/device, account type captured?
Evidence	Screenshot/log/video referenced?
Severity/priority	Justified by impact, not emotion?

Blank Reusable Template

- Title:
- Environment:
- Steps to reproduce:
- Expected result:
- Actual result:
- Evidence:
- Severity / Priority:
- Notes:

Practical Exercise

Take a real (sanitised) bug report, run it through the review prompt, and list three improvements you accepted and one suggestion you rejected because it was wrong.

Best Practices

- Let AI improve the words; you own the facts.
- Always sanitise data before pasting.
- Re-read steps to reproduce after editing — clarity edits can break accuracy.

Common Mistakes

- Accepting reworded steps without re-checking them.
- Letting AI invent an environment or severity.
- Pasting real customer data into a public tool.

INSIDE STLC PRO TIP

A clear bug report gets fixed faster. Use AI to remove ambiguity, but the developer is acting on your facts — so verify them.
