

AI FOR QA TESTERS

AI Usage Policy Template

A simple, adaptable policy for using AI responsibly in QA work.

Introduction

Using AI professionally means protecting data and following clear rules. This template gives you a starting policy you can adapt for yourself or propose to your team.

Instructions

- Adapt the clauses below to your organisation and approved tools.
- Share it with your team and keep it visible.
- Review it as tools and policies evolve.

Worked Example (policy clauses)

Area	Policy
Approved tools	Only use [approved tools] for work involving company data.
Data	Never paste secrets, credentials, customer or production data. Use synthetic/dummy data.
Verification	All AI output is reviewed and verified by a person before use.
Accountability	The author owns AI-assisted work as if they wrote it themselves.
Confidentiality	Respect IP and confidentiality; do not share proprietary code with public tools.
Transparency	Note where AI was relied upon when it materially affects deliverables.

Blank Reusable Template

- 1. Purpose & scope
- 2. Approved tools
- 3. Data handling rules
- 4. Verification requirements
- 5. Accountability

- 6. Confidentiality & IP
- 7. Transparency
- 8. Review cadence

Practical Exercise

Draft a one-page version of this policy for your own QA practice, including two example prompts you would NOT send and how you would rework them safely.

Best Practices

- Keep it short and practical.
- Anchor it on data safety and human accountability.
- Align it with any existing company policy.

Common Mistakes

- Treating policy as optional.
- No data-handling rules.
- Never reviewing or updating it.

INSIDE STLC PRO TIP

Demonstrating responsible AI use is now a professional expectation. A clear personal policy sets you apart as trustworthy.
