

AI FOR QA TESTERS

Module 5 Assignment — AI-Assisted Test Case Design

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

You need test cases for a feature quickly. You will generate them with AI, then review and harden them so they reach the same bar as work you wrote yourself.

What you'll demonstrate

- Generate test cases with AI
- Review and improve AI output
- Prioritise by risk

What to submit

- AI-generated test cases for a feature
- A review note: what you kept, changed and rejected (including a hallucination removed and a boundary case added)

Step-by-step

1. Prompt AI for positive/negative/boundary cases
2. Review against the checklist — remove invented cases, add missing boundaries
3. Tighten vague expected results
4. Prioritise by risk

Submission format

Submit as a PDF or DOCX — generated set plus your review notes.

How your work is assessed

If a QA lead reviewed this, they would look for:

- Generated cases hardened by review
- Boundary/negative coverage added
- Hallucinations removed; risk-prioritised
- Specific expected results

Templates & resources to use

- AI Test Case Review Checklist — find it in the Resource Vault.
- AI Validation Checklist — find it in the Resource Vault.

INSIDE STLC PRO TIP

The review is what proves QA skill — anyone can generate; a professional catches what is wrong or missing.
