

AI FOR QA TESTERS

Module 9 Assignment — Automation Support with AI

Assignment brief: scenario, deliverables, steps and how your work is assessed.

About this assignment

You are using AI to support an automation task. You will show AI accelerating the work while you keep ownership — good locators, verified fixes, code you understand.

What you'll demonstrate

- Use AI to support automation
- Apply good-practice judgement to AI output
- Verify before trusting

What to submit

- One AI-supported automation task (generate test data, draft a selector strategy, or explain an error)
- A note of what AI produced and what you verified or changed

Step-by-step

1. Pick an automation task and prompt AI for help
2. Review the output (locators robust? code understood?)
3. Fix anything brittle and verify the result
4. Document what you accepted and changed

Submission format

Submit as a PDF or DOCX.

How your work is assessed

If a QA lead reviewed this, they would look for:

- AI used to accelerate, with output reviewed
- Robust locators and verified fixes
- Synthetic data only
- Code you can explain

Templates & resources to use

- AI Prompt Library (100 Prompts) — find it in the Resource Vault.

INSIDE STLC PRO TIP

Copying code you cannot debug just moves the problem downstream — run and understand everything before trusting it.
